

Project Food, Land & People

Creation of Project Food, Land & People began in 1988 through a coalition of educators, agriculturalists, environmentalists, and resource conservationists who recognized that the United States and the world lacked information about the relationships between agriculture, the environment, and human populations.

Initiated by the Colorado Ag in the Classroom Task Force, FLP emerged to:

- stimulate students to understand the interdependence of food, land and people;
- create opportunities for awareness, critical thinking and skills development;
- develop responsible behavior

The Committee on Agricultural Education in Secondary Schools recommended that:

“All students should receive at least some systematic instruction about agriculture beginning in kindergarten or first grade and continuing through 12th grade.”
